REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

United States Patent No. 648,442 (Scott hereinafter) shows a wind turbine apparatus comprising a conduit having an inlet 16, middle and outlet 18 section arranged in flow series, wherein a rotor comprising a shaft 20 and blades 22 is positioned in the middle section. Furthermore, the wind turbine apparatus comprises a splitter 30 located in the inlet section, whereby inlet flow is divided before reaching the rotor. As seen in Fig. 2 shown partially below, the middle section comprises an interior wall shaped coaxial with the rotor shaft 20.

Scott does not however, teach or fairly suggest a second interior wall of the middle section shaped coaxial with the rotor shaft 20. And in the examiner opinion, one having ordinary skill in the art at the time the invention was made would not have found

Art Unit: 3745

it obvious to add a second interior wall to the middle section, coaxial with the rotor shaft since the addition of said second wall would disrupt the fluid flowing through the turbine, thereby decreasing the efficiency of the turbine apparatus.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Cited Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Holter et al. (U.S. Patent No. 6,638,005) is cited for showing a wind turbine having a middle portion with interior walls 25b, 27b shaped complimentary to the rotor periphery. The rotor is a vertical axis rotor with blades 46 spaced radially from the rotational axis 60.
